Object: Application for a 3-4 months internship in machine learning at Capgemini

Dear hiring team at Capgemini,

I'm writing to apply for a 3-4 months internship in machine learning at Capgemini. As a first-year master student in Artificial intelligence at the university of Paris-Saclay, I'm interested in machine learning, data science, deep learning, computer vision and NLP. I'm confident my qualities and experiences align closely with the responsibilities outlined in your internship.

I'm currently pursuing my master's degree in AI at the University of Paris-Saclay. I'm very passionate about AI and have had experiences in different fields of machine learning through several projects like classification of imbalanced medical data, geographic image classification using TensorFlow (Computer vision), A sentiment analysis for Amazon food reviews using PyTorch (NLP). I've also done a short research internship in Ethics of AI and issues of discriminatory biases. Furthermore, I'm taking part in the Hackathon organized by Hi! PARIS in March around challenges on data science, sustainability, and business subjects. I'm very passionate about AI as you see and would love to have this opportunity and contribute to projects at Capgemini through this internship.

I have a bachelor's degree in computer science from the university of Montpellier. During my three years of studies there, I did three internships, two of which were in the research laboratory of the university (LIRMM). Furthermore, I contributed to over 15 project and was team leader for 6 of them. All that shows my autonomy and motivation. For more information on me, my experience, internships, or projects, I invite to visit my personal website: mashra.fr

Please don't hesitate to reach out if you have any question about my background. I look forward to discussing this internship with you in more detail. Thank you for your time and consideration.
